## Application Range

| Standard Measuring Range: | 0.05 to 0.7 ppm |
| :--- | :--- |
| Number of Strokes n: | 10 |
| Time for Measurement: | approx. 3 min |
| Standard Deviation: | $\pm 10$ to $15 \%$ |
| Color Change: | pale blue $\rightarrow$ white |

Ambient Operating Conditions

| Temperature: | 0 to $40^{\circ} \mathrm{C}$ |
| :--- | :--- |
| Absolute Humidity: | 2 to $30 \mathrm{mg} \mathrm{H} \mathrm{H}_{2} \mathrm{O} / \mathrm{L}$ |

## Reaction Principle

$\mathrm{O}_{3}+$ Indigo $\rightarrow$ Isatine

## Cross Sensitivity

No interference by:
1 ppm sulfur dioxide
1 ppm chlorine
1 ppm nitrogen dioxide
Higher concentrations of chlorine and nitrogen dioxide discolor the indicating layer a diffuse white to pale grey.

## Extension of the Measuring Range

Using $\mathrm{n}=5$, multiply the reading by 2 ; the measuring range will be 0.1 to 1.4 ppm . Using $\mathrm{n}=100$, divide the reading by 10 ; the range of measurement is 0.005 to 0.07 ppm .
